## *Erica* 'Crystal Palace'

— *Erica patersonii* × *perspicua* [fide E. G. H. Oliver] —

has been registered by

**SATOSHI MIWA**  
Hamamatsu, Japan.

REGISTRAR \_\_\_\_\_ DATE \_\_\_\_\_  
on behalf of The Heather Society

Its characteristics at the time of registration were

Flowers numerous, in clusters of 2–4 at ends of leafy shoots;  
corolla to 2cm long, tubular, white, translucent, 4-lobed, minutely hirsute on exterior;  
sepals 4, pale green, with gland-tipped marginal hairs;  
ovary pale green, glabrous, squat, 6-lobed, emarginate;  
style erect, recessed in top of ovary, glabrous, style-apex capitate, not emergent;  
stamens 8, included; filaments slender, erect; anthers dark, minute ( $\pm 1.2$ mm long),  
with slender, linear appendages ( $\pm 0.7$ mm long).  
Foliage mid-green; leaves in whorls of 4, linear,  $\pm 7$ mm long, with sparse, minute hairs.  
Habit: erect, to 0.7m in 2 years from cuttings.

Origins: chance seedling which appeared among seedlings  
grown from the seed supplied by Silverhill Seeds from South Africa.  
This plant first flowered in February 2000 at Shiota Heath Garden, Hamamatsu, Japan.

**Cultivar registration number: E.2008:03**
