

THE HEATHER SOCIETY

acting as

INTERNATIONAL CULTIVAR REGISTRATION AUTHORITY

certifies that

***Erica verticillata* ‘Belvedere’**

has been registered by

ANTHONY HITCHCOCK

Nursery, Plant Collections & Threatened Species Program Manager
Kirstenbosch National Botanic Garden

REGISTRAR _____ DATE _____
on behalf of The Heather Society

The characteristics of this Cape heath at the time of registration were

Medium, erect shrub, to an average height of 1.7m, to 1m wide; old specimens to 2.0m.
Flowers light pink, translucent in sunlight, tubular, 20mm, 3mm diameter; arranged in terminal,
4-flowered (occasionally 3-, 5- or 6-flowered) umbels on
very short lateral branches arranged in whorls.
Synflorescences neat, spike-like, each with up to 6 whorls of flowering branches,
on strong, erect main branches; terminal apex of the stem continuing growth.
Non-flowering lateral branches on the main flowering stems in whorls of 5.
Foliage green; leaves to 5mm long.
Seed produced.

Origins: accession number 109/01; this clone came from Belvedere Palace, Vienna, and probably originated from collections made for Emperor Frans Joseph II by George Scholl between 1796 and 1799. It has been cultivated in Vienna since early 1800s.

Cultivar registration number: E.2012:07
