

THE HEATHER SOCIETY

acting as

INTERNATIONAL CULTIVAR REGISTRATION AUTHORITY

certifies that

***Erica verticillata* ‘Harry Wood’**

has been registered by

ANTHONY HITCHCOCK

Nursery, Plant Collections & Threatened Species Program Manager
Kirstenbosch National Botanic Garden

REGISTRAR _____ DATE _____
on behalf of The Heather Society

The characteristics of this Cape heath at the time of registration were

Medium-sized, erect shrub, to an average height of 1.0–1.2m, to 0.6m broad.
Flowers light pink, tubular, 20mm long, 4mm diameter, arranged in terminal 4-flowered or occasionally 5-flowered umbels, on very short lateral branches arranged in whorls.
Synflorescences neat, spike-like, each with up to 6 whorls of flowering branches, on strong, erect main branches; terminal apex of the stem continuing growth.
Non-flowering lateral branches on the main flowering stems to 4–5cm long, in whorls of 5 or occasionally spirally arranged.
Foliage dark green, leaves to 5mm long.
Seed produced.

Similar to ‘Doctor Violet Gray’ (accession number 548/06)

Origins: accession number 657/06 received from Royal Botanic Gardens, Kew
(accession number 1961-9001).
Harry Wood, Curator of the Fernkloof Nature Reserve, Hermanus, sent seed to Kew in 1961.

Cultivar registration number: E.2012:10
